

Compare-Contrast Summary Frame

The **Forest** and **Wetland** are alike and are different in several ways. First, they are alike because **both are habitats** but they are different **based on what you find living there**. Secondly, **the forest** is **rougher terrain** while **the wetland** is **not rocky**. Finally both habitats are alike because **they are a warm green place for animals to live**. But, they are different because **the environment provides food and homes for land versus water animals**.
